1. The amendment filed on 11/10/08 is entered and made of record.

2. **Examiner's Amendment**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eckhard Kuesters on 12/11/08.

The application has been amended as follows:

With regards to claim 11, replace the last limitation "after the first imaging optics forms the first optical image and the detected pattern generator detects the first optical image to generate the detected pattern data, the repeated pattern area generator generates the image data of the entire image region of the pattern from the design pattern data with the lower pixel size to detect if the candidates for the repeated pattern areas exist, and the comparator compares the detected pattern areas on the detected pattern data with the die-to-die comparison." with --after the first imaging optics forms the first optical image and the detected pattern generator detects the first optical image to generate the detected pattern data, the repeated pattern area generator generates the image data of the entire image region of the pattern from the design pattern data with a pixel size

corresponding to the first magnification to detect if the candidates for the repeated pattern areas exist, and the comparator compares the detected pattern areas on the detected pattern data with the die-to-die comparison.--.

**3. Reasons for Allowance**

Claims 1-22 are allowable.

With regards to claim 1, the examiner cannot find suggestion or motivation disclosing a comparator which sequentially compared the first detected pattern data corresponding to the plurality of repeated pattern areas detected by the repeated pattern area detector through the second imaging optics in accordance with die-to-die comparison, wherein after the second imaging optic forms the second optical image of the pattern, the low-resolution image data generator generates the second detected pattern data corresponding to the entire pattern region using the second optical image, the repeated pattern generator detects if the candidates exist, the first imaging optics forms the first optical image of the candidates, the detected pattern data generator generates the first detected pattern data of the candidates, and the comparator compares the first detected pattern data with die-to-die comparison in combination with the rest of the limitations of claim 1.

With regards to claim 11, the examiner cannot find any applicable prior art and suggestion disclosing after the first imaging optics forms the first optical image and the

detected pattern generator detects the first optical image to generate the detected pattern data, the repeated pattern area generator generates the image data of the entire image region of the pattern from the design pattern data with a pixel size corresponding to the first magnification to detect if the candidates for the repeated pattern areas exist, and the comparator compares the detected pattern areas on the detected pattern data with the die-to-die comparison in combination with the rest of the limitations of claim 11.

With regards to claim 19, the examiner cannot find any applicable prior art and suggestion disclosing while the imaging optics forms the optical image and the detected pattern generator detects the optical image to generate the detected pattern data, the repeated pattern area detector analyzes the layout information of the design pattern data as to whether the patterns from the same file exist, detects and registers the repeated pattern areas from the design pattern data, and the comparator compares the detected pattern data corresponding to the detected pattern areas registered with the die-to-die comparison in combination with the rest of the limitations of claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
